

Ideas

① Chloropleth Map

② Proportional symbol map

③ Line chart

④ Bubble Chart

⑤ Pyramid Chart

⑥ Stacked bar chart

⑦ Pie Chart

⑧ Word Cloud

⑨ Treemap

⑩ Pictogram

⑪ Donut Chart

⑫ Radar Chart

⑬ Span Chart

⑭ Lollipop Chart

⑮ Bump Chart

⑯ Radial Chart

⑰ Grouped bar chart

⑱ Heatmap

Filter

① Pyramid Chart

- hard to compare two categories
- stacked bar chart is a better option

② Pictogram

- user need to manually count the difference if both category proportion is similar

③ Treemap

- will get overclutter when there are too many categories

④ Radar chart

- difficult to rank the categories based on their importance
- bump chart is a better option and can visualize changes in rank across years

⑤ Lollipop Chart

- hard to compute yearly total arrivals

⑥ Grouped Bar Chart

- will get overclutter where there are too many categories

Categorise

① Trends in arrival count

- line chart
- stacked bubble chart

② Breakdown of tourist demographic

- stacked bar chart
- bubble chart

③ Comparison of tourist behaviour

- pie chart
- span chart
- word cloud
- bump chart
- donut chart
- radial chart
- heatmap

④ Comparison in tourism statistic based on location

- chloropleth map
- proportional symbol map

Combine and Refine

+

Arrival Count

Both charts represent similar information and can be combined

Question

① Will it be hard to visualise a category in radial chart if its proportion is very small?

② What if the ranking for all categories does not change across year, will the bump chart be pointless to visualise the data?

Operation

Select Year

This allows users to filter the data according to Year. Once a year is selected, the corresponding data will be displayed with the categories

number of location

This slider controls the amount of data being displayed and

The legend has a function that allows the user to select on a specific category and the color will be highlighted to focus, while other category will be desaturated

Tooltips are enabled for all charts to display comprehensive information

Example of tooltip for map:

State: Johor
Tourist Arrivals (million): 5.8

Discussion

• Advantage:

- ① Chart that display information which belong to a focus section are grouped together
- ② Annotations or text descriptions are provided for viewer to gain better insights on the charts

• Disadvantage

- ① Hard to identify centre of visualisation as all chart seemed to be equally important
- ② Annotations on chart might cause visual clutter

Focus

- All charts are equally important in displaying information related to the tourism industry in Malaysia
- All charts under the Pre-Departure and Statistic have a text description to describe the analysis on the visualized information
- The choropleth map and combined line stacked bar chart will have annotation overlay directly on the chart

What they usually search for?

What is their purpose of visit?

Where do they usually visit?

What is their expenditure pattern?

Operation

number of item

The slider controls the amount of data being displayed

This interactive legend allow viewer to focus on a specific category while other categories are deactivated

Select country

All ✓

The dropdown filter allows viewer to filter data based on country

Tooltips are enabled for all charts to provide more information

Example of tooltip for pie chart:

Location: Bukit Bintang
Tourist Count (Million): 0.88

Discussion

• Advantage:

- ① Text descriptions are provided for each chart for viewer to gain better understanding
- ② Interactive filters are available for viewer to filter information based on their needs

• Disadvantage:

- ① Hard to identify centre of visualisation as all chart looked equally important

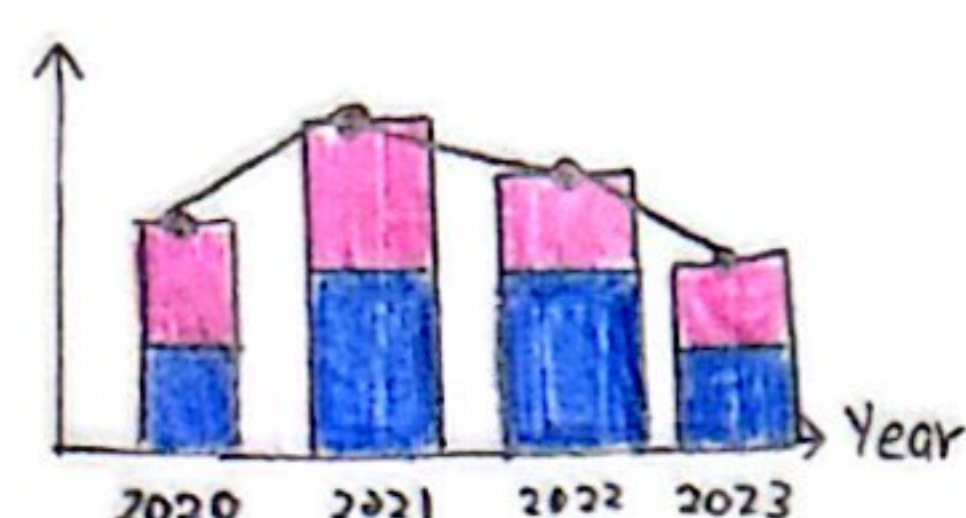

Focus

- All charts are displaying the breakdown of tourist demographic and their behaviour patterns, providing insights to identify common patterns
- Text descriptions are placed next to each chart to allow viewer easily reference the chart while reading the analysis
- Interactive features are included for viewers to explore more data by applying the filter

select Country

All v

The dropdown selection allows user to view distinct information for each country

number of country

The slider controls the amount of information being displayed

Tooltips are enabled for all charts to display comprehensive information

Example of tooltip for heatmap

Quarter: Q1
Search Item: Item 3
Number of Searches: 833

Discussion

• Advantage:

① The sections segregates type of information being displayed which guide viewer on the flow to read the charts

② Text descriptions are included to provide extra information

• Disadvantage:

① There may be visual clutter at bubble chart when it is displaying 40 countries information

Focus

- The choropleth map and bubble chart are the main focus in this dashboard due to their size and amount of information displayed
- Interactive filters are available for the charts to allow viewer filter information based on their needs
- Annotations and text descriptions are included to provide more insights into the displayed statistics on Malaysia's tourism landscape

text

Operation

- Include legends for all possible charts to allow viewer filter information
- Include tooltips for all charts to display more information on the data
- Each text description should provide additional context on the information visualized by the chart
- Include filtering options such as drop-down selection or slider to control the amount and type of data being displayed

Detail

- Resources
 - ① Use HTML, CSS to format the style of user interface
 - ② Use vega lite to create the charts
 - ③ Topojson file containing map details
 - ④ Five datasets from reliable online portals

Estimated time: 7 days

- 5 days to create visualization
- 1 day for writing text descriptions
- 1 day for improving UI

Requirements:

- ① Include interactive features
- ② Use appropriate colours which is visually friendly for colour blind viewer

Focus

- Viewing Flow: Map → Tourist Demographic → Top Web Searches → Purpose of Visit → Top Shopping Location → Expenditure
- Comprehensive information on the analysis of each chart is displayed using text or annotation
- Use darker colour for section header, reasonable colour scheme for distinct categories
- Consistent font for texts
- Place legends near to charts
- Ensure annotations do not overlapped with the point marks
